DETAILED ACTION

Allowable Subject Matter

Claims 1 – 6 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Aruga shows a vertically stacked laminated circuit board comprising conventional top and bottom ground planes and a via connected stripline (Fig. 8) but does not teach or suggest the second grounding conductor portion located in an area other than the wiring prohibited area at a position different than the first grounding conductor.

Hamre shows a vertically stacked laminated circuit board comprising conventional top and bottom ground planes and connected overlapping striplines (no via connected striplines) but does not teach or suggest the second grounding conductor portion located in an area other than the wiring prohibited area at a position different than the first grounding conductor.

Okada also shows a vertically stacked laminated circuit board comprising conventional top and bottom ground planes (albeit staggered) and a single stripline (no via connected striplines) and similarly does not teach or suggest the second grounding conductor portion located in an area other than the wiring prohibited area at a position different than the first grounding conductor.

Ishida a vertically stacked laminated circuit board comprising conventional top and bottom sectional ground planes and a via connected stripline (Fig. 8) but does not teach or suggest the second grounding conductor portion located in an area other than

the wiring prohibited area at a position different than the first grounding conductor where the first and the second ground planes overlap where the first and second ground planes are located on the obverse and reverse side of the multilayer substrate.

The prior art does not teach or suggest the limitations of at least claims 1 and 5, nor would it be obvious to combine the cited prior art, thus the claims are allowable.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Aruga shows a vertical transition device.

Hamre shows a layered printed circuit board.

Okada shows a stripline connector.
